

G-Series Cloud containerizes IT applications on the Microsoft Azure Platform so they can be used on any mobile or desktop device.

MICROSOFT AZURE ISV PROFILE: SPHERE 3D

Sphere 3D Corp. (NASDAQ: ANY) is a virtualization technology and data management solutions provider. We offer a complete solution for hybrid cloud that ranges from our G-Series and V3 virtualization offerings to our Snap family of products, whether on-premises with SnapServer, in a distributed environment with SnapScale, or with our recently introduced SnapCLOUD available on the Microsoft Azure platform.

WHAT WE OFFER

G-Series Cloud powered by Glassware 2.0 containerizes existing Windows applications with ease. Customers can rapidly deploy the solution as a service on the Microsoft Azure public cloud platform to modernize and mobilize IT applications on any desktop or mobile device.

Reduce TCO by 75% with the break-through density of the G-Series Cloud architecture. Opens up the business case for virtualization of any Windows client application. Sphere 3D's containerization approach significantly lowers desktop computing costs through reduced new application development and infrastructure and streamlined application virtualization administration and support.

Extend useful life of applications with unique containerization technology that removes Windows applications' dependency on the underlying operating system. Both new and legacy 16, 32 and 64-bit applications can be mobilized and deployed natively to most any end user device without any complex code changes.

Fast and efficient implementation that easily containerizes Windows applications in minutes using an intuitive, wizard-based orchestrator that does not require specialized virtualization or development skills or incremental infrastructure investment as is the case with traditional desktop virtualization systems.

WHAT CUSTOMERS ARE SAYING

"Working with Sphere 3D has enabled us to offer our school districts a cost-effective solution for delivering digital learning applications across any device platform, including Google Chromebooks, iPads, and other mobile devices."

– **Melissa McClatchy, Coordinator of Technology Integration for Region 6 ESC**

Microsoft Azure

Microsoft Azure is an open and flexible cloud platform that enables you to quickly build, deploy, scale, and manage applications across a global network of Microsoft data centers. You can build applications using multiple languages, tools, and frameworks.

KEY USE CASES

WEB APPLICATIONS

Build anything from lightweight websites to multi-tier cloud services that scale up as your traffic grows.

CLOUD STORAGE

Rely on geo-redundant cloud storage for backup, archiving, and disaster recovery.

BIG DATA & HPC

Get actionable insights from your data by taking advantage of a fully compatible enterprise-ready Hadoop service.

MOBILE

Accelerate your mobile app development by using a backend hosted in Microsoft Azure. Scale instantly as your install base grows.

MEDIA

Create, manage, and distribute media in the cloud – everything from encoding to content protection to streaming and analytics support.

FLEXIBLE APPLICATION MODEL

Microsoft Azure provides a rich set of application services, including SDKs, caching, messaging, and identity. You can write applications in .NET, PHP, Java, node.js, Python, Ruby, or using open REST protocols. This is all part of Microsoft's promise to let you build using any language, tool, or framework.

ALWAYS ON, ALWAYS HERE

Build resilient applications with automatic operating system and service updating, built-in network load balancing, and geo-redundant storage. Microsoft Azure also proudly delivers a 99.95% monthly SLA. You can rely on decades of experience in data center operations and trust that everything Microsoft Azure offers is backed by industry certifications for security and compliance.

DATA CENTER WITHOUT BOUNDARIES

Microsoft Azure makes it easy for you to integrate your on-premises IT environment with the public cloud. Migrate your virtual machines to Microsoft Azure without the need to convert them to a different format. Use the robust messaging and networking capabilities in Microsoft Azure to deliver hybrid solutions, and then manage your hybrid applications from a single console with Microsoft System Center.

GLOBAL REACH

With data centers around the globe, a massive investment in data center innovation, and a worldwide Content Delivery Network, you can build applications that provide the best experience for users, wherever they are.
